Challenge-4

Guan Ziwen

2023-09-06

Questions

Load the "CommQuest2023.csv" dataset using the read_csv() command and assign it to a variable named "comm_data."

```
# Enter code here
library(tidyverse)
## -- Attaching core tidyverse packages ----- tidyverse 2.0.0 --
## v dplyr 1.1.2 v readr
                                 2.1.4
## v forcats 1.0.0 v stringr
                                1.5.0
## v ggplot2 3.4.3
                      v tibble
                                 3.2.1
## v lubridate 1.9.2
                      v tidyr
                                 1.3.0
## v purrr
             1.0.2
## -- Conflicts ----- tidyverse conflicts() --
## x dplyr::filter() masks stats::filter()
## x dplyr::lag() masks stats::lag()
## i Use the conflicted package (<a href="http://conflicted.r-lib.org/">http://conflicted.r-lib.org/</a>) to force all conflicts to become error
comm_data <- read_csv("CommQuest2023_Larger.csv")</pre>
## Rows: 1000 Columns: 5
## -- Column specification -----
## Delimiter: ","
## chr (3): channel, sender, message
## dbl (1): sentiment
## date (1): date
## i Use 'spec()' to retrieve the full column specification for this data.
## i Specify the column types or set 'show_col_types = FALSE' to quiet this message.
```

Question-1: Communication Chronicles Using the select command, create a new dataframe containing only the "date," "channel," and "message" columns from the "comm_data" dataset.

```
# Enter code here
df<- select(comm_data, date, channel, message)
df</pre>
```

```
## # A tibble: 1,000 x 3
##
     date
                channel message
##
      <date>
                <chr>
                        <chr>
##
  1 2023-08-11 Twitter Fun weekend!
   2 2023-08-11 Email Hello everyone!
   3 2023-08-11 Slack Hello everyone!
##
  4 2023-08-18 Email Fun weekend!
## 5 2023-08-14 Slack Need assistance
##
   6 2023-08-04 Email Need assistance
##
  7 2023-08-10 Twitter Hello everyone!
## 8 2023-08-04 Slack
                       Hello everyone!
## 9 2023-08-20 Email
                        Team meeting
## 10 2023-08-09 Slack
                        Hello everyone!
## # i 990 more rows
```

Question-2: Channel Selection Use the filter command to create a new dataframe that includes messages sent through the "Twitter" channel on August 2nd.

Solution:

```
# Enter code here
df<-filter(comm_data, channel == "Twitter", date == "2023-08-02")
df</pre>
```

```
## # A tibble: 15 x 5
##
      date
                channel sender
                                      message
                                                       sentiment
##
      <date>
                <chr>
                        <chr>
                                      <chr>
                                                          <dbl>

```

Question-3: Chronological Order Utilizing the arrange command, arrange the "comm_data" dataframe in ascending order based on the "date" column.

Solution:

date

channel sender

##

```
# Enter code here
arrange(comm_data, date)
## # A tibble: 1,000 x 5
```

sentiment

message

```
##
      <date>
                <chr>
                         <chr>
                                      <chr>>
                                                          <dbl>

## 10 2023-08-01 Slack
                        @frank_chat
                                      Need assistance
                                                          0.602
## # i 990 more rows
```

Question-4: Distinct Discovery Apply the distinct command to find the unique senders in the "comm_data" dataframe.

Solution:

```
# Enter code here
distinct(comm_data, sender)

## # A tibble: 6 x 1

## sender

## <chr>
## 1 dave@example

## 2 @bob_tweets

## 3 @frank_chat

## 4 @erin_tweets

## 5 alice@example

## 6 carol_slack
```

Question-5: Sender Stats Employ the count and group_by commands to generate a summary table that shows the count of messages sent by each sender in the "comm_data" dataframe.

```
# Enter code here
comm_data %>%
  group_by(sender) %>%
  count()

## # A tibble: 6 x 2
```

```
## # Groups:
               sender [6]
##
     sender
                       n
     <chr>
##
                   <int>
## 1 @bob_tweets
                     179
## 2 @erin_tweets
                     171
## 3 @frank_chat
                      174
## 4 alice@example
                     180
## 5 carol slack
                      141
## 6 dave@example
                     155
```

Question-6: Channel Chatter Insights Using the group_by and count commands, create a summary table that displays the count of messages sent through each communication channel in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm data %>%
  group_by(channel) %>%
  count()
## # A tibble: 3 x 2
## # Groups:
               channel [3]
##
     channel
                 n
##
     <chr>
             <int>
## 1 Email
               331
               320
## 2 Slack
## 3 Twitter
               349
```

Question-7: Positive Pioneers Utilize the filter, select, and arrange commands to identify the top three senders with the highest average positive sentiment scores. Display their usernames and corresponding sentiment averages.

```
# Enter code here
comm_data %>%
  filter(sentiment > 0) %>%
  group_by(sender) %>%
  summarise(average_sentiment_scores = mean(sentiment)) %>%
  arrange(desc(average_sentiment_scores)) %>%
  slice(1:3)
## # A tibble: 3 x 2
##
                 average_sentiment_scores
     sender
     <chr>>
                                      <dbl>
## 1 dave@example
                                      0.541
## 2 @frank_chat
                                      0.528
## 3 alice@example
                                      0.493
#comm_data %>%
#filter(sentiment > 0) %>%
#group_by(sender) %>%
#mutate(average_sentiment_scores = mean(sentiment)) %>%
#ungroup()%>%
#distinct(sender, average_sentiment_scores) %>%
#arrange(desc(average_sentiment_scores)) %>%
#slice(1:3)
```

Question-8: Message Mood Over Time With the group_by, summarise, and arrange commands, calculate the average sentiment score for each day in the "comm_data" dataframe.

Solution:

```
# Enter code here
comm_data %>%
    group_by(date) %>%
    summarise(average_sentiment_scores = mean(sentiment)) %>%
    arrange(date)
```

```
## # A tibble: 20 x 2
##
      date
                 average_sentiment_scores
##
      <date>
                                     <dbl>
   1 2023-08-01
                                  -0.0616
##

## 20 2023-08-20
                                   0.0608
```

Question-9: Selective Sentiments Use the filter and select commands to extract messages with a negative sentiment score (less than 0) and create a new dataframe.

```
# Enter code here
negative <- comm_data %>%
  filter(sentiment < 0) %>%
  select(message, sentiment)
negative
```

```
## # A tibble: 487 x 2
##
     message
                      sentiment
##
      <chr>
                          <dbl>
##
  1 Hello everyone!
                         -0.143
## 2 Need assistance
                         -0.108
## 3 Hello everyone!
                         -0.741
## 4 Hello everyone!
                         -0.188
```

```
## 5 Hello everyone! -0.933
## 6 Need assistance -0.879
## 7 Great work! -0.752
## 8 Team meeting -0.787
## 9 Fun weekend! -0.539
## 10 Exciting news! -0.142
## # i 477 more rows
```

Question-10: Enhancing Engagement Apply the mutate command to add a new column to the "comm_data" dataframe, representing a sentiment label: "Positive," "Neutral," or "Negative," based on the sentiment score.

Solution:

```
# Enter code here
comm_data %>%
 mutate(sentiment_label = ifelse(sentiment > 0, "Positive", ifelse(sentiment == 0, "Neutral", "Negative")
## # A tibble: 1,000 x 6
##
                channel sender
     date
                                      message
                                                      sentiment sentiment_label
##
                <chr>
                        <chr>
                                      <chr>>

Question-11: Message Impact Create a new dataframe using the mutate and arrange commands that calculates the product of the sentiment score and the length of each message. Arrange the results in descending order.

Solution:

5 2023-08-07 Slack

```
# Enter code here
df<- comm_data %>%
  mutate(product = sentiment*nchar(message)) %>%
  arrange(desc(product))
## # A tibble: 1,000 x 6
##
                channel sender
                                                      sentiment product
      date
                                     message

Question-12: Daily Message Challenge Use the group_by, summarise, and arrange commands to find the day with the highest total number of characters sent across all messages in the "comm data" dataframe.

Solution:

```
# Enter code here
#comm_data %>%
    #group_by(date) %>%
    #mutate(total_character_count = sum(nchar(message))) %>%
    #arrange(desc(total_character_count))

comm_data %>%
    group_by(date) %>%
    summarise(total_character_count = sum(nchar(message))) %>%
    arrange(desc(total_character_count))%>%
    slice(1)
```

```
## # A tibble: 1 x 2
## date total_character_count
## <date> <int>
## 1 2023-08-10 875
```

Question-13: Untidy data Can you list at least two reasons why the dataset illustrated in slide 10 is non-tidy? How can it be made Tidy?

Solution: Insert your answer here

The dataset's "Subject" column consist of more than one type of variables. For instance, it contains variables such as "age", "gender", "employment status", "type of employment".

The dataset have also misplaced "Unemployment rate" as a observation rather than a variable.

Create new columns for the different variables such that there is only one variable per column.
